

## Six communication-memory failure modes → scenario families

- **wrong-run** twin\_run, branch\_merge, artifact
- **wrong-task / scope** private\_summary, branch\_merge
- **stale / superseded** superseded\_policy, pause\_resume
- **unauthorized** private\_summary
- **missing critical** context\_manifest, artifact
- **unreconstructable** audit\_reconstruction

*FFCR = completion AND none of the six modes AND reconstructable*
